Art Unit: 1745

1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Sugino et al. describe a fuel cell operating system that monitors the pressure of the hydrogen fuel during operation of the fuel cell; Imamura et al. set forth a hydrogen pressure regulating valve that adjusts the pressure of the hydrogen that is fed into a fuel cell system and JP-2003-308868 disclose a pressure sensor in a line that supplies fuel from a fuel tank to a fuel cell.

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Claim 7, line 1,--to-- has been added after "according".

3. The following is an examiner's statement of reasons for allowance: none of the prior art of record teach the method for estimating the pressure of a fuel tank in a fuel cell system according to a fuel consumption amount and a fuel discharge amount, by first calculating the pressure of a fuel tank before a predetermined time interval from the time of failure of a tank pressure sensor and a fuel consumption amount and fuel discharge amount after the detection of the failure. The calculating step occurs when a failure of the tank pressure sensor has been detected. None of the art of record teach such steps in this fuel cell method. The closest art, Sugino et al. does not set forth the estimating nor the calculating step as applicant has claimed.
